TBH filter and extraction systems

### **Online trade show with expert presentations on ATEX and correct handling of hazardous substances**

STRAUBENHARDT - After the cancellation of important trade shows, TBH GmbH is launching for the first time a virtual version on their company's own website [www.tbh.eu](http://www.tbh.eu). From June 15 until 16, 2021, the manufacturer of filter and extraction systems from the Black Forest will be presenting products specifically for the pharmaceutical industry. In cooperation with Dr. Jürgen Franke, Consilabs expert on substance properties and hazard analysis, TBH experts Tim Augenstein and Vincenzo Russo will explain how to define an ATEX environment and answer questions in the website's livestream afterwards. In a second presentation, TBH expert Bernd Nauheimer will show the correct handling of hazardous substances and clarify how to comply with limit values. Occupational safety is the focus on both presentations.

Extreme caution is required when working in an ATEX environment or with flammable substances. Many guidelines must be observed. Therefore, it is important to know what matters in a correct assessment and how one can protect themselves. Toxic gases and vapors can easily arise during processes such as decanting work and may even ignite. Extraction systems by TBH provide the necessary protection to ensure this does not happen.

During the online trade show on the TBH website, the company will present a selection of their products in a live stream. Visitors can ask their questions to the extraction experts either in the live chat or in virtual rooms.

In addition to the own trade show on June 15 and 16, TBH is also participating at Achema Pulse, the virtual version of Achema. This is the world's largest trade show for process industry in the fields of chemical engineering, process technology and biotechnology. Their platform allows visitors to chat directly and personally with TBH sales experts or to make a video call with them between 9 am and 4 pm. A personal video consultation can be scheduled. Both live presentations can be watched live in English starting at 2 p.m. each at Achema Pulse. The extraction experts will answer questions in the livestream on [www.tbh.eu](http://www.tbh.eu) afterwards, followed by the German version of the presentations.

Provide yourself with relevant knowledge, drop by, ask your questions about extracting in ATEX areas and correct handling of hazardous substances.
